

Discs for cleaning the surface of Viroc panels

When Viroc panels are supplied raw, the surfaces may show some irregularities, such as small incrustations, dirt, stains, scratches, salts (efflorescence) and small wood chips.

Whenever the panel is applied visibly, the visible surface must be cleaned/polished with a cleaning disc, in order to remove dust, scratches, dirt and salts. Cleaning/polishing does not change the panel's natural appearance, it maintains the stains and heterogeneities that characterize it, as well as some salts and incrustations that are embedded in the surface.

GlobalSilva sells cleaning discs suitable for cleaning/polishing the surface of Viroc panels.

Reference: Scotch-Brite™ Hookit™ Polishing Disc 152 mm

Example of polishing a panel
